

Instructions for Submission: The Professor's Enigma

To prove you have successfully unlocked Professor SS Lachure's PC, carefully follow the steps below to complete the challenge and format your final submission.

Link to maze maker executable (Use VJTI mail id):

Windows:

<https://drive.google.com/file/d/16BpX9BOcCfeNdWUKyn-vfCCxsw3RZSHb/view?usp=sharing>

Linux:

https://drive.google.com/file/d/1w1VUFvUKirjYa5zl9q1D4ggZkvSqVh-U/view?usp=drive_link

Mac:

<https://drive.google.com/file/d/1vyjl4GFtOWiPFMV1T51eS4hMVMRL0U44/view?usp=sharing>

Step 1: Generate the Challenge Data

- Download the relevant zip ,according to your local machine.
- Extract the contents of the zip in an empty folder.
- Open your terminal or command prompt in the folder containing the executable.
- Run the tool to generate exactly 100 mazes:

- Windows: `.\MazeMaker 100`
- If getting error like application control policy blocked try this

This error typically occurs because Windows 11's Smart App Control (SAC) or a built-in security policy blocks the file. This usually happens if the file is unsigned, unrecognized by Microsoft's cloud database, or flagged as potentially unwanted.  Microsoft Learn +2

You can resolve this by temporarily modifying your Windows Security settings or unblocking the specific file. 

Method 1: Unblock the Specific File

If the file was downloaded from the internet, Windows often places a security lock on it.  Ithaca College +1

1. Right-click the blocked file and select **Properties**.
 2. Look at the bottom of the **General** tab for a **Security** section.
 3. Check the box that says **Unblock**.
 4. Click **Apply** and then **OK**. Try running the file again.  YouTube · OnlineComputerTips +1
- - Linux: `./maze_maker 100`

- Mac: `chmod +x maze_maker`
`./maze_maker 100`
- Verify that a new folder named mazes has appeared in the same directory, containing 100 .png files.
- DO THE BELOW IF ABOVE STEPS FAIL
- **Docker:**
 - https://drive.google.com/drive/folders/11PArPqmr937Ds3_svhmCuxkqStxqL1Sh?usp=drive_link
- **Docker Install steps:**
 - **Mac:** <https://www.youtube.com/watch?v=agkOZr27d3Y>
 - **Windows:** <https://www.youtube.com/watch?v=5Mfe54238xE>
- **If none of the above works**, open the Docker link, install the tar, save it in a folder and run these 2 commands
 - `docker load -i maze_maker_docker.tar`
 - `docker run --rm -v "$(pwd)/mazes:/app/mazes" maze_maker`
- If all fails, then only use the mazes.zip
(https://drive.google.com/file/d/1wL6FSAp3k-ERrIKU1YQckKFq3xyiQr8a/view?usp=drive_link) static folder provided.

Step 2: Solve the Enigma

Write your own code (in any language) to read the images from the mazes folder, clean up the visual noise, navigate the traps, and solve the valid mazes according to the problem statement.

Your script must generate a new folder named answers containing visually solved versions of the valid mazes (showing the paths).

Your script must print the final password number (the product of all valid shortest path lengths modulo $1e9 + 7$). Path length here means total number of cells visited.

So

```
..#
.#.
```

...

(where # is obstacle)

Path length is 5

```
*.#
*#.
```

'*' symbols make path

Step 3: Prepare Your Submission

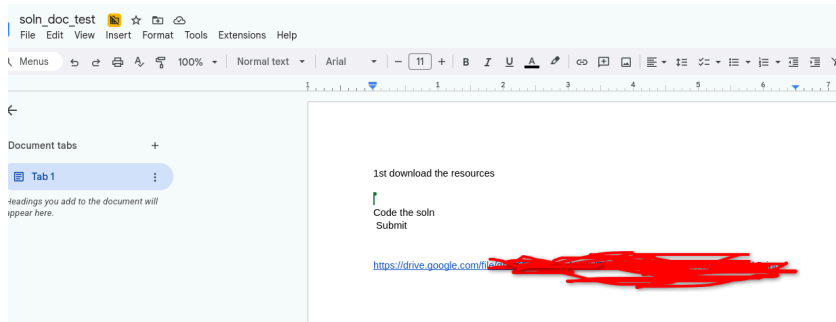

Once you have retrieved the final password, bundle your files for grading. Create a single ZIP archive containing exactly the following files and folders:

- [] maze_maker (The executable file you initially downloaded).
- [] mazes/ (The folder containing the 100 generated raw images).
- [] answers/ (The folder generated by your code containing the solved maze images).
- [] solution_code.py (or .cpp / .java etc. — The actual code you wrote to solve the puzzle).
- [] password.txt (A plain text file containing only the final modulo integer answer outputted by your code).

Name	Original Size	Compressed Size	Mode	CRC checksum	Method	Date
> answers	2.4 MiB		drwxr-xr-x		Store	6/8/26 5:56 PM
> mazes	30.8 MiB		drwxr-xr-x		Store	6/8/26 5:56 PM
maze_maker	147.6 KiB	41.4 KiB	-rwxr-xr-x	CA1CD979	Deflate	6/5/26 11:01 AM
maze_solver.py	2.8 KiB	1.1 KiB	-rw-r--r--	7FF7C12A	Deflate	6/3/26 10:55 PM
password.txt	9 B	9 B	-rw-r--r--	A42A3932	Store	6/8/26 5:34 PM
requirements.txt	13 B	13 B	-rw-r--r--	58BDA295	Store	6/8/26 4:14 PM
soln.py	2.8 KiB	1.0 KiB	-rw-r--r--	1126A65F	Deflate	6/8/26 5:53 PM

Name your zip file **FirstName_LastName_MazeChallenge.zip**, upload it to drive and mention the link in the doc whose link you will submit on the website as per given instructions.

Example doc ss:

Example answer images of an impossible and a solved maze:

IMPOSSIBLE, LACHURE SIR TRICKED ME
